MNC UNO R1

Arduino compatible learning and prototyping board

STATUS: IN DEVELOPMENT | PRELIMINARY SPECIFICATIONS

Overview

A proposed educational development board for learning circuit fundamentals, microcontroller programming, sensor integration, and hands on electronics.

Proposed technical specifications

Microcontroller	ATmega328P (design target)
Operating logic	5 V (design target)
Digital I/O	14, including 6 PWM capable outputs (target)

Analog inputs	6 (target)
Clock	16 MHz (target)
Programming	Arduino IDE compatible workflow (target)
Connectivity	USB connection; exact implementation subject to validation

Intended applications

LED circuits, buttons, sensor readings, robotics, motor control, introductory automotive electronics and maker prototypes.

Engineering and safety notes

Concept illustration is not a production PCB layout. Electrical ratings, component selection, USB implementation, pin mapping, safety, and software compatibility must be validated on a physical prototype.
